## **DETAILED ACTION**

### ***Claim Objections***

Claims 1 and 10 are objected to because of the following informalities: In claims 1 and 10, line 2, there is no antecedent basis for the claimed "the controller".

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fardal et al.'980 (Fardal) in view of Hofmann '233. Fardal discloses a control system (figures 1-3) for use with a grain harvester (generally 10) having various transducers (column 2, lines 54-58) and sensors 23 for detecting the passage of grain as well as a comparator circuit 78 to compare the sensed information in contrast to predetermined values. Further, Fardal discloses varying operating perimeters (column 2, lines 9-54)

Art Unit: 3671

based on these sensed conditions with ground speed (Abstract) being one of the varied perimeters but fails to show the use of relays. However, Hofmann teaches that it is well known to employ relays 21 in concert with sensed control systems (figure 1) on harvesters (column 1, lines 10-12). It would have been obvious to one having ordinary skill in the art at the time of the invention to replace the signal combining circuit of Fardal with the relays as taught by Hofmann in order to provide a system having greater electro-mechanical advantage.
